A POCKET GUIDE TO

HAWAII

Illustrated by
H. O. Baker

Illustrated by
H. O. Baker

THIS IS ABOUT HAWAII to introduce you to a new country. New countries are like new friends. You can't get to enjoy them until you've learned something about them—until you know the score. So here's the score on Hawaii.

Your Hawaiian Islands are a chain of volcano peaks reaching up out of the Pacific about halfway between the United States and Asia.

The base of this mountain range is some 14,000 feet below sea level so if you climb to the top of Mauna Loa—the 14,000-foot volcano on the Island of Hawaii—you can boast that you've stood at the summit of the highest mountain in the world. Even when you're at sea level you're high up the mountainside.

Eight of the Hawaiian Islands are big enough to write home about. Some of the rest of them are so small that there isn't a pen post; few enough to put them on the map.

Before the Japanese went berserk, the Hawaiian Islands had three notable products—sugar, pineapple, and citrus. The sugar and pineapple were shipped to the mainland (continental U. S.) where you ate them. The climate was used by an ever increasing host of enthusiastic tourists.

It all worked out pretty happily.

Then came December 7, 1941—and the fast blow that brought us all to Hawaii, soldier, as the way to Tokyo.

The main island of the Hawaiian group is called Oahu. It isn't the biggest, but it's the most important, because the city of Honolulu is on it. Oahu is only 43 miles long and 21 wide, but here you'll find an astonishing variety of scenery, floral beauty, and bustling human activity.

Honolulu is 2,000 natural miles from San Francisco and 3,500 from Yokohama.

This cream that is a long way, home from Honolulu, via Japan.

The first thing you will notice about the city of Honolulu is that it's full of drug stores, department stores, auto dealerships, movie houses, offices, and even Americanos. It has buses that change in cities a mile, these taking for no time.

There are cops, public schools, dial telephones, theaters, hot-dog stands, public libraries, YMCA's, restaurants, daily newspaper, radio repair shops, gas stations, public parks, and playgrounds.

On the streets you'll see such sights as newsboys hawking morning papers, people from offices hurrying to get in buses so they won't arrive home late for supper, to cars dodging trailer red freight, (they had to roll the beds were buckets on wheels) in the supermarkets.

So you're now as far as my dream home as you think.

Of course, you'll see palm trees, giant ferns, tropical flowers that may be unfamiliar to you. And on the background will be the mountains.

When you go outside the city, around the island of Oahu, you'll see fields of papaya stretching for miles. And more acres of sugarcane.

You'll see people working in these fields. They'll be just as American as you. And just as proud of it.

Maybe you'll go to one of the other Islands in the group. The largest is Hawaii. Most people think that Hawaii is the Hawaiian. But that's only because they don't know. It's 200 miles from Oahu to Hawaii.

The island of Hawaii is big—so big as Connecticut and Rhode Island put together. It is 83 miles long, 73 miles wide, and 443 miles around—more than 4,000 square miles of land.

Some of the most beautiful scenery in the world is on Hawaii. There are snow-capped mountains, two of which are more than 13,000 feet high, and there are two volcanoes, Mauna Loa and

The people out here say that sugar is king in Hawaii. That's because the Islands practice so much. But they also are proud that one of the largest cattle ranches in the world is on the island of Hawaii—the Parker Ranch. When you eat fresh meat at man-eat here, chances are it came from this ranch.

The other six large islands are Maui, Kauai, Lanai, Molokai, Niihau, and Lubodawen. Sound like hard names to remember. But after you've been out here awhile you'll learn how to pronounce them, and they'll become as familiar to you as Massachusetts, Iowa, Connecticut, or Arkansas.

Maui is second in size of the Islands. It is called the "Valley Island" because of its several beautiful winding stream beds. It's famous for its hospitality and for a volcano seven feet high with a burned-out crater 45 inches across.

Kauai is the "Garden Island" of the group, because of the breath-taking beauty of its lush foliage and flaming blooms. Its highest peak is called Waialeale, which is pronounced "Waah-ah-leh-ah" and means "ripping water" without the bubbles. A big old name for a mountain peak that's all wet with 400 inches of rain a year. Seven rivers run, at Kalalau Stream, the annual rainfall is only an inch.

Kauai is also renowned for the atmospheric beauty of

the Canyon of Women, which is Hawaii's own Grand Canyon.

Lanai is called the "Pineapple Island" because it is completely owned by a pineapple company.

Molokai is the "Friendly Island," a name that has been earned by its hospitality to benevolent and its harboring of the leper colony which Robert Louis Stevenson made famous in his description of the great and good work done by Father Damien, who devoted his life to the welfare of those afflicted with that tragic disease.

Kahoolawe is the separator at the island. "Great Lived," or "Dust Island," they call her. There are no streams or springs on the island and practically no foliage. Last figure on population was two (2) people.

Molae is another dry spot, but it possesses a plantation which grows good grazing; entirely devoted to stock raising.

That's the list of the big ones. You'll come to be as proud of them as the people who live here are proud of calling themselves Americans.

4

WE, THE PEOPLE

These are a local creation of the Islands. Most of them were here before the Japs attacked Pearl Harbor. And they have every intention of staying when we GI's go home.

In 1940 there were 465,339 inhabitants.

You're going to meet these people. They're your neighbors. And it's a good idea at, right at the start, you know a few thoughts about them. It may prevent you from making mistakes.

There's one primary point to remember: No matter what the color of their skin, no matter how they appear, the civilians you see in the Hawaiian Islands are Americans. That, as far as proud of the Stars and Stripes as you are. Never forget that.

You're going to run into a lot of Japanese during your stay. In 1940 there were 157,000 people of Japanese descent here. That means that 34 out of every 100 civilians were Japanese.

Now get this straight. Most of these were no Ameri-

7

can schools. They learned to pledge their allegiance to the same flag you salute. They like American soft drinks. And one of their favorite radio voices is Bob Hope. They're Americans.

What's more, many of them have husbands, sons, and brothers fighting for Uncle Sam. These Japanese Americans (Nisei) aren't just talking pretense. Their husbands proved, in the battle of Iwo Jima, that they are willing to die for it. Don't tell them about

The native Hawaiians are a much smaller group. In 1941 there were only 14,242 pure Hawaiians and 9,445 part Hawaiians.

These Hawaiians are fine folk. Don't let any fantastic fiction you may have read about them back home show you off the beam. These people have certain fundamental ideals. They believe in strong bodies, in clean living and in democracy.

The second largest group on the Islands is composed of the folks from back home who came over here in 1941, and their children. In 1941 there were 139,296 of them. Some arrived for a year and hired the place so well they never went back. Others came out to work for a year or two, fell in love with these beauties of America in the Central Pacific, and remained.

Talk to the business people in the center of Honolulu.

Again and again you'll hear the same story: "I moved over for a year in '41. But I'm still here. I only wish you could see our city when we don't have a war on."

You've probably heard Hawaii referred to as the Crossroads of the Pacific. That's an apt phrase. People from all the far-flung corners of the world have come to live in Hawaii. The big influx started back in the 1860's when shiploads after shipload came over to work on the plantations.

In addition to the Japanese on the Islands, there are 8,000 Puerto Ricans, 2,200 Chinese, 7,000 Koreans, and 3,000 Filipinos.

Today these people are hard with a common purpose—to do their level best to help win the war. Not only have a great many joined the armed forces, but they're buying bonds, doing Red Cross work, taking part in all the civilian war activities the same as the people at home.

But keep this in mind, when you meet the people over here. They've been under attack. They've been living in a war atmosphere for a long time. They've been working long hours, suffering the inconveniences of over crowding, malaria, gas rationing and other necessary wartime restrictions.

They haven't complained. They aren't complaining now. But it hasn't been easy for them. So give them a break, and they'll meet you more than halfway.

A LITTLE HISTORY

If you're ever on a game program and the \$100 question is "From what race do the Hawaiians come?" you'll take the money if you answer "Polynesians."

Students who study races have plucked out their beards arguing the origin of the Hawaiians. But the most generally accepted theory is that they emigrated from Asia more than a thousand years ago, sailing thousands of miles across the Pacific in double canoes. How they set up a formidable tree system.

Recorded history in the Islands begins with their discovery by Capt. James Cook, British, on a Sunday morning in January of 1770.

Cook had come from the Society Islands in the southwest Pacific and was hunting for a passage from the Pacific to the Atlantic. He had a quick temper, a flowing beard, a couple of ships, and a great uncertainty about where he was going.

When he arrived, he didn't know where he was.

The natives were equally confused. Believing in a large number of gods and never having seen a white man, they began the idea that Cook was a chief god (Lono).

He had ships sailing out of his hand. The Islands (he called them the Sandwich Islands in honor of the Earl of Sandwich) were his. But he made the mistake of hanging around.

The natives got so trading with Captain Cook, and his men. And pretty soon they came to realize that white men were a long way from being gods.

The natives, like all people who find their confidence betrayed, were considerably sore about it, and Cook's men annoyed them still further by chopping up a couple of their sacred sticks for firewood. During one of the evening scuffles a native club, with close combat training, struck a wooden dagger into Captain Cook's back. He died on the beach at Kauaiice on the Island of Hawaii.

The rest of the expedition took to their boats and no other white men visited the Islands for 7 years.

Up until 1793 there had been a tradition of little long domes throughout the eight islands. There was plenty of room for all of them, but a few big chiefs wanted more than their share. The result was war, plenty.

Then a chief of Kona, named Keonekahuha, decided

that the wrestling had gone on long enough. He was a big kapuna you can see a statue of him in a golden trailer clock outside the Judiciary Building on King Street in Honolulu. He decided the only way to teach force was with greater force. With the help of some white advisers he conquered all the other chiefs on the Island of Hawaii. Then he built a fleet of outrigger canoes, some mounting brass ordnance, and set out for Maui and Oahu. It wasn't long before he had annexed all the islands under one rule, and he presented to govern with a fairness and wisdom which won him the title of Kamehameha the Great, and gained Hawaii real respect.

When Kamehameha was a boy Hawaii was living in a stone age culture, worshipping pagan gods, and was unknown in the rest of the world. When one life time all that was changed. Stone tools and weapons were scrapped when metal tools and weapons arrived

Wooden idols were banished and deadly clubs broken.

Kamehameha I died in 1819. The next year a boat load of missionaries arrived from Boston. They opened Christianity and they started schools. Hawaii became a part of New England in the tropical Pacific. As a result,

by the middle of the 19th century, the Hawaiians were just as well educated in the average throughout the United States. Well-to-do families in Lahaina sent their children to Honolulu for schooling. The result is that when you're in Hawaii, you're in an enlightened part of the United States, and one of the most democratic. Dr Sun Yat-sen, founder of the Chinese Republic, was educated here in Hawaii.

While this was going on, Western people and Western ideas were taking hold. Trading ports were set up. Ships docked to take on cargos of sandalwood, salt, food, and water. Whalers established a great base here.

In 1843 a British sea captain gained control of the Islands. But

after a few months, his superior gave them back to the reigning King, Kamehameha, son of old Kamehameha, known known as Kamehameha III. His nephew, Alexander, who ruled as Kamehameha IV, also favored Great Britain, but this was balanced by strong American interests. The rulers were worried about the possible fate of the Islands as long as they remained independent. After however both were overthrown Germany and Japan.

Back in the States, Washington was interested too. Hawaii was the perfect site for a naval base to guard our West Coast. Then, too, American economic ties with the Islands were growing stronger. For example, the Monarchy and Uncle Sam in 1850 signed a treaty which, among other things, let Hawaiian sugar enter the States duty free.

In 1893 an internal bloodless revolution deposed Queen Liliuokalani, and a provisional government, headed by Sanford B. Dole, was formed. Admission to the United States was requested, but President Cleveland disapproved. Disappointed, the provisional government set up an independent republic. This lasted until 1898. Then a new move for annexation was made and this time Congress ratified the treaty. President McKinley signed it, and Hawaii became American soil. In 1900, the Organic Act made it a full fledged Territory.

By that act Hawaii became an integral part of the United

States. (So from now on you'd better speak of the "Mainland.")

You have only to look around to see the result—use of the finest democratic anywhere at present. Americans Democracy, as the Hawaiians, is taken seriously. They practice it. And it works knitting many people of different races together in a concerted effort to build a better, freer, and happier life for all.

Nowhere in the Pacific do Americans live as well. There are many problems to be met, as there are back home, but the people of Hawaii are tackling them in an American democratic in atmosphere of freedom and good will. A striking example of what we're fighting for.

Progress on the Islands since the turn of the century has been steady, but unspectacular. For example, in 1929 the biggest event, and listed in all the books, was the opening of the Hawaiian Travel Bureau.

In 1929 a daring young man by the name of Bud Mars made the first flight in Hawaii in an airplane.

The next year saw the tourist boom. The swamps around Waikiki were filled in. Hotels and apartments were built. Hawaiian music became the rage back on the Mainland.

Life was peaceful and pleasant. It might have continued that way had it not been for December 7, 1941.

Subsequent history? You'll help make it.

HULA AND HULU

You've heard a lot about the Hula. Hawaii and the Hula!

Maybe you're one of those gullible guys who saw

glorious sun, just swaying their hands, against a golden Hollywood tropical backdrop, and thought you had a hula just like this under a try palm tree.

"Well, you're going to see the real McCoy now. There's a good idea if you get rid of any notions you may have had and learn the truth.

First of all, the Hula is not a dance!"

"Not a dance," you say. "Then what is it?"

The Hula is a style of dancing, as, if you will, a "school" of dancing.

When the white man came to the Islands, dancing was a part of the original ritual of the natives. Each group worked out its own routine. These were complicated or simple to fit the occasion.

There were ceremonial Hulas and funeral Hulas, Hulas for fun and Hulas for funerals. There was even a type of Hula for the chubby folk who preferred to go through the movements while sitting down. But all the various dance ceremonies worked out by all the groups were known as Hulas.

Now, if you see a pretty Hawaiian girl wearing a grass skirt and dancing some form of the Hula, go-ray. She may be a graduate of the University of Hawaii with a Ph.D. in—The Dance. Well, why not?

GOVERNMENT OF, AND, OVER HAWAII

Government in Hawaii is pretty much like that back in the mainland, with three big differences:

First, the Congress is represented by the President but he isn't the legislator. A legislator is a member.

Second, the people can't ballot in the Presidential election.

Third, Hawaii, not being a state, lacks a vote in Congress. You don't get the idea that a dance swing weighs in Washington. It does—through a Delegate who sits on both House and Senate committees, and otherwise carries the banner for the Islands.

Many of the people here have voted bond. After the war you can expect a lot of discussion pro and con. Whatever the outcome, Hawaii will continue to be a friend of the United States.

As a Territory Hawaii has its own legislature. The Senators (14) and Representatives (50) are elected by the 130,000 citizens. They meet, pass the local laws, and send them up to the Governor, to be approved or disapproved.

If some one tells you the Governor is spending at the "old stand" in Hilo hale, be simply assure that the Captain used to be a palace. King Kalakaua held court there, as did his wife, Queen Liliuokalani.

You can remember the king's name by looking at the corner signs on the streets along Waikiki Beach. You won't have any trouble with the Queen's name either. Just remember that hawk on the Maileland that called her "Queen Lili." You also might like to remember that Queen Liliuokalani was the composer of the haunting Hawaiian melody "Aloha Oe" which she adopted from an old American ballad entitled "The Lone Rock by the Sea." Her song has become one of the most popular songs in the United States.

When the United States annexed the Islands all the fancy building was done in an elaborate building, surrounded by beautiful grounds, which you'll find in the city center of Honolulu. This is the Iolani Palace. It's a building worth seeing. You can peek up some I call history by looking over the paintings on the walls and murals. You can see how the kings of Hawaii as well as the days of the monarchy, and a glower at the wood-work will show you what good craftsmen can do with the wood of the koa and koa trees.

But don't expect to see any fancy tales on the down-

is the Capitol or other government buildings. They are the usual American Attorney General, Treasurer, and Director of Inspectors. There is even the familiar D. A.

For the local angle, you can drop in on the Territorial Circuit Court (the President picks the judges), or the District Courts (the Territorial Supreme Court names the magistrates), and see how justice is dispensed in a Territory of the United States.

There's taxes too. We warn you that the Tax Collector will notice you if you buy one of the Islands' famous macarons which lead us to advise you to pack up a light伞. The tea is favored by the people. Can doesn't grow here.

PACIFIC

OCEAN

Hawaiian

SUGAR CANE INDUSTRY? TELL, PLEASE?

Major industries on the Islands can be counted like fingers.

Up until one year ago sugarcanes in these parts was simply a howling-gum-on-the-stalk. It just grew.

Then someone there voted that the word "sugar" meant

sugary, and sugar refining began. From then on, it's been a growing industry.

A million tons of sugar are produced each year on the Islands from a quarter million acres, and bring in \$6 million dollars.

The 40 major plantations used to average a thousand workers each, but now are down to half that number we need gone more than sugar.

It takes about one chunk of cane to get a chunk of sugar. Plus a year and a half to two years for growing. Plus a lot of water for irrigation.

Puffing is done on the Mainland, except for one place at Acau. If you sit over up that way (it's on Oahu), a trade will be glad to show you the process.

In addition to raising a lot of cane, the Islands do a nigh smart business in pineapples, which is surprising when you consider that the pineapple wasn't a Hawaiian fruit at all.

Pineapple, Model 1493. In that year it seems that, having found America, Columbus discovered the pine apple. Not by discovered it on the Island of Guadeloupe in the Caribbean Sea. Apparently he left a sight where he found it used as Englishman named Baldwin imported the Smooth Cayenne variety from Jamaica to Oahu.

This was in 1774 and the industry has been strong

right along even more
so million acres are
packed off 75 to the
thousand acres and
bring in 30 million
dollars.

Fight big battles,
run the shot. When
they can get them
they hire more than
30 thousand workers.
Right now they can't
get that many.

Incidentally, don't leave the Islands without going
through a country. Just phone one of the larger ones and
find out what day you can come. The wait takes only
about 45 minutes—and you'll be served all the juice you
can drink.

After pineapples and sugar, come tobacco. For while
they contributed 10 million dollars a year. There's a lot
of talk flying around about the trade having been killed
off by the war—but that's strictly a false rumor.

Mores of this, there are more tobacco leaf than rice
before taxied; most of them are wearing whatever they
wants, but they pack a lot of purchasing power.

Beside Pearl Har-
bor a lot of the ac-
tivities come out on
the big Pacific Island,
across from to Capo.
Bill Mason's whores
or the "Brown Glass
dine" which has had
"So Long French Hd.
Hilo" in 1940.

After Pearl Har-
bor—she will count
out of the big Pacific

Islands temporarily under new management—U. S. N.

Right along in the "T" column with Toulum n. Tona.
And there the war has burst. In the "old days," seven
out of every ten tons on your favorite grocery shelf were
born right here. After the big attack, the lid clamped
down. Now, Uncle has let a hole or two of falling
revenue, but not enough to erode over the runs.

Another Hawaiian enterprise which you probably never
see in the movies is cattle-raising. It doesn't begin to
match sugar or pineapple production. But it's still im-
portant, and sizable quantities of meat products, bacon,
ham, and bacon find their way to the Mainland.

THE ARMY

The vr brand about carrying coal to Newcastle? Not that it has anything to do with the Army—

Except that, when you arrive in Hawaii, all fresh and happy, in your best G.I.C.C., you're going to want one just exactly like a chunk of coal at this old English mining town.

The Army has been established on the Hawaiian Islands a long time. In fact two batteries of U.S. Artillery landed here as far back as 1848. They were on their way from Boston to Oregon by the long route around the Horn and dropped in for a friendly visit. When Hawaii became part of the United States, the Army became part of Hawaii.

When an army just moving it needs posts, camps, and stations. To solve the housing situation Major General Schofield came out to the Islands 72 years ago and made a survey. The Survey has been busy building installations ever since. You'll probably be surprised at more than one of them from time to time so it will be well for you to know a bit about the traditions lie behind the names they bear.

Schofield Barracks is the biggest installation on the Islands. It was established in 1893 and was named in honor of that same Maj. Gen. John McAllister Schofield who made the survey. He had commanded the Army of the Union in the Civil War.

Fort Shafter was the first permanent post. Built in 1898, it was named in honor of Maj. Gen. William R. Shafter who led the United States Forces which freed Cuba. Remember the Rough Riders, and San Juan Hill?

Fort Armstrong was named after Brig. Gen. Samuel C. Armstrong, who landed from Hawaii, landed with distinction in the Civil War, and attained lasting fame as the founder of the Hampton Institute in Virginia.

Fort DeRussy bears the name of Brig. Gen. Rose Edward DeRussy, of the Corps of Engineers.

Maj. Gen. Thomas H. Ruger was another distinguished veteran of the boys in blue. His name was given to the coast defense installations at Diamond Head.

Fort Kamehameha, originally named Fort Upolu, after Gen. Emery Upolu, was renamed in honor of as great a warrior as the Islands have ever known, that wise King Kamakaheha the Great.

Lake Field on Ford Island, honors the name of Lt Frank Lake, an ace of World War I, who was brought to earth behind the German lines after downing his fifth enemy plane and who shot it out with the ground troops rather than surrender. He was a Texan who died with his boots on.

Wheeler Field is named Maj. Sheldon Wheeler, killed in a crash on Lake Field, and Lt Col Horace M. Hukuhara, who died in a crash at Fort Crockett, Texas, is honored in the name of Hukuhara Field.

Today the Army is entrusted with the safeguarding of Hawaii. It is the Army's job to make it a grim mistake for any enemy force which tries to land on one of these Islands. It is the Army's job to make the Islands the springboard for the leap to Tai-ku. Which are good poems to bear in mind—because, soldier, you are the Army?

THE NAVY

In 1843, the U. S. S. Constitution visited Honolulu. In 1845, the U. S. S. Constitution came here. Sabers were fixed to the Hawaiian Flag, and so King Kamehameha III, whose Kingdom had been reduced to Iron by the British Government. About this time, the Navy discovered a harbor which would be big enough to float

the boat. This harbor famous for its pearl oyster beds, came to be known as Pearl Harbor.

Now, when anyone says Navy in Hawaii, he means Pearl Harbor.

There are other bases, of course. Such as the one at Kaneohe, which is also on Oahu. But most of them can begin to match Pearl Harbor.

Back about 1880, the Navy first secured the right to set up a repair station at Pearl Harbor. Then it went to Congress—and came out with a hundred thousand dollars.

The money was used to start the job.

First, a coral bar had to be approached. It blocked the harbor entrance. And a big drydock had to be built. More funds were asked, and granted. Work moved along and the dock was about ready for business in 1915 when hydrogen pressure cracked the foundation.

The Navy revised its plans, got back to work, and in 1919 broke out a bottle of champagne for the dedication.

To date more than 10 million dollars have gone into making Pearl Harbor the world's finest naval base. It is one which not only the United States but Japan long will have reason to remember.

THE MARINE CORPS

As usual the Marines were first to land. A hundred and thirty years ago Lieutenant Franklin, U. S. Marine Corps, landed on Hawaiian soil as commander of a party

ship captured in the War of 1812. As a combat man he was a great success, winning from the Hawaiian people a lasting respect and friendship for the Marines.

Their first job on the Islands was in 1843, when Lieutenant Joseph Catts, of the Marine Guard aboard "Old Ironsides," made the Navy survey that showed Pearl Harbor to be the best site for a naval base on the Central Pacific.

Seven years later, Marines came ashore to help King Kamehameha III quell riots started by foreign sailors. They stayed awhile to train the King's troops. This probably prevented an invasion of the Islands. A gang of adventurers from the California mining camps had chartered a ship for the purpose, but got cold feet when they found out what they were up against.

The Marines landed again in 1854, 1868, and 1889, to quell rioting, and each time they achieved success without bloodshed because of the respect the people had for the Leathernecks.

In 1898 the Marines took part in the ceremonies that raised the Stars and Stripes over the Hawaiian Islands. In 1904, they established a shore station and moved in to stay. Today the Marines are regarded as *Islanders* (which means they are not only old-timers, but are a part of Hawaii itself).

THE COAST GUARD

Some time ago you discovered that a sailor with a small should put over the cuff of his right sleeve is a Coast Guardsman.

Established 1920, the Coast Guard is Uncle Sam's oldest seagoing service and all over the Pacific they're going to sea. They landed Marines at Tofaga during the last Solomons attack. They helped to save Archibald and Kiska in the Aleutians. They landed soldiers and marines and equipment on the beachheads of the Gilberts and the Marshalls.

The Coast Guard now operates under the Navy, and its job never ends. It provides port and water-front security patrols on shore and afloat. It operates cutters and patrol boats on war missions. It works 24 hours a day perfecting methods of rescue and life saving undersea, landings, and runs a training station here, where are learned all the tasks of the Service for duty in sea and afloat.

The Coast Guard is an important part of the over bar team which is advancing us all to attack.

INQUISITION

Cards are issued in Hawaii. When you've been off the boat for as long as 23 months you'll find that telephone numbers here carry the same classification as war planes. They are marked "Secret" and kept in money belts.

If, by hook or crook, you back on to a few numbers besides the laundryman's (and he won't be easy to get as you might think), you may wind up with a date. If

the music stops, the two of you can go swimming, walk, take in a movie or dance. If you're numberless, you can still go swimming, walk, or take in a movie.

Which is to say that a uniform here is about as useful as a light bulb in a peace sign on Times Square. And there simply aren't enough uniforms (gold) to go around. Sooner or later (sometimes sooner than a week, sometimes longer) you'll get invited to what philosophers call "An experience."

You won't have any trouble knowing when you've "accepted." It's the sign you decide that what you

really need more than anything else in life is a double-masted, chocolate-flavor

"Having accepted," you can settle down to having a good time in your off-duty hours, because the Army knows the reasons men have, that you do, and is doing plenty about it. It has established a big Special Service Office which devotes its full time to seeing that you have ample opportunities for recreation.

Recreation means recreation after war or weariness. It means pleasure, diversion, or play. The Special Services Division helps set up your recreation and athletics programs, operates your Army Library Service, and the Post Exchange. Special Services and the Signal Corps work together to bring you motion pictures. U.S.O. shows are set up around in the units.

Another organization, the Information and Education Bureau, is designed to lend help to you in your more serious interests, especially about the uses and progress of the war. YANK, Armed Forces Radio Service, Overseas and Educational programs are a few of the things which come under this office of the War Department.

If you're interested in swimming, dancing, seeing movies, sightseeing (on Delta or the other islands), shooting a lot of chess or check or back-shooting pool, playing golf, tennis or ping-pong, enjoying a night of good wine

or classical records, or doing anything else to relax and cover his—get up and go. Find out where the necessary sources are and make good use of them.

But suppose you're one of those who know that an education is as good as money in the bank? Perhaps Paul Revere might see right between your senior year and a diploma, and you want to set aside some of your spare time to catch up with your education. The Army can fit that, too.

Right here at Hawaii is a fully equipped branch of the U. S. Armed Forces Institute. USAFI can arrange a correspondence course that will make it possible for you to gain credits at your high school or college back home and keep abreast of the education that was temporarily halted if it's a business course or technical training you want. USAFI can fit you up with that, too.

Get in touch with your Information and Education officer and he will tell you how to go about it. If duty allows, you can arrange for group classes with the use of self-teaching tests that are turned out by the USAFI. They're good stuff and we hear that foreign language lessons can be fun in off-duty hours, the way they're doled out through a phonograph record for the crowd to repeat in chorus.

"WELL AND SAFE, LOVE"

You Can Write . . . Once you've arrived in Hawaii, you'll want to get all letters telling the people back home where you are and what it's like.

Rights then is where you run into one of the most misunderstood individuals who ever started a soldier's life or helped to win a battle. You know how it feels, now, to hope that your trumpet won't be used by a saboteur—but now you can find plenty of old timers who can tell you how fervently you'll pray that any attack you may be subjected to will catch the enemy with his pants flat from us. Well, that's where the CENSOR comes in. Censor is an old Roman word meaning censor. It's his job to know just what information the Nazis or the Japs would like to have about our war plans and to prevent that information getting out and about. To do that he's got to look for it everywhere. So by scrutinizing all com- munciations which leave the area, (Surveillance means surveillance. All areas all. Communications means all that's "written and transmitted.")

As first you may not like it. You'll say, "my folks know the war. They won't spill anything they shouldn't."

The answer to that is, are they wise?—not unusually.

But you know how we Americans like to talk. And the Axis know it, and is listening. That's why a word

chopped over a coke in a Sheboygan drugstore, plus a name mentioned on a Charleston street corner, may add up to a gem bushel for some of your friends or an island bush.

So you can see why you can't discuss the corners of areas when you write, or give the exact location of your own. Why you can't name any ships, nor give the day you came over on. Or tell when they sailed or when they docked. Why you can't mention the number of men who are with you. Why you can't say you're sta. berred at Schubfeldt, or Armstrong, or Budget, in any of the other ports. Why, in short, you have to lay off the moisture when you're writing home.

You'll have a couple of talks by your Comruse on what you can write about, and you'll find a piccy. You may be assigned to duties as far as places where you'll be under certain restrictions for an indefinite period, during which you can't leave yourself so lonesome any more especially than at "somewhere in the Pacific." But if you're not under such restrictions, you can come right out and say you're at

Honolulu. You can say you went to Honolulu on your last pass, or am in Waikiki, had a few beers at McWayne. You can describe your girl, love her, or tell of all the exciting afternoons you spent in the Public Library.

A good technique is simply to tell you're in the Army and limit your writing to purely non-military subjects. Once you get the hang of it, you'll be turning out long and interesting letters and relishing the Comruse at a job of coloring which he doesn't like any better than you do.

You Can Write . . . If you're slow on the letter writing it's a good idea to keep the folks from worrying by sending them a cablegram as soon as you are allowed to let them know you're here. Your GI post office has stock messages (Expedited Force Message) that will say almost anything you want. And for only 75 cents (50¢ if composed with name highlights and also have to be encased.)

You Can Phone . . . If you get too homesick for the sound of a certain voice, and your commanding officer's restricted, and you're still in the fine flesh of pay-day,

prosperity, you can take a walk at the intra-Pacific radio telephone.

You just have to check in with the Base Leader, tell him a firm which asks who you're calling, why, and what the type of your conversation will be, have it approved by your Unit Commander, and put it on your call. Pick up blocks at Base Leader's office or at the Mutual Telephone Building. Another place they will answer any questions.

The cost? A 5 minute call varies from 10 dollars (West Coast) to 14 dollars (East Coast). If it's the wrong side of the day, you can offset the charges.

Maybe You Can Learn . . . By visiting the houses and museums and golf courses, and gardens, communities and villages, by getting to know the people and listening to their tales, you can learn to know the legends, the history and personalities of the Islands, their trees and mountains and natural wonders so well that Hawaii will soon seem to be a strange place if you. It will become a part of America, full of wonders to enjoy, and of friends with new and different viewpoints, brought there the free visitors of the world. Once you have learned to love Hawaii, the kindly sound of ALOHA will get under your skin and stay with you wherever you may go.

What Else Can You Do? . . . Well, here are three little

Q

words, three little mottoes to think about, even in the Hawaii. But their importance is Army wide.

If you just like to sit around and shoot the breeze in your spare time, that's good. It's Army. In that old return, the G.I. Bell System.

But take it easy on RUMMERS and remember about MILITARY SECURITY.

In Hawaii, you are at one of the busiest warfare crossroads. You might pick up a lot of so-called box dope. Well, why not keep it to yourself? If you don't, Nip spies may pick it up and go to work. Don't talk, unless you want to give "aid and comfort" to the enemy. And no right guy wants to do anything like that.

You Can Help Yourself to Good Health . . . Hawaii is a healthful place compared with many other parts of the world. The Islands have a good record in disease control, and you ought to pitch in and keep up the good work. But the most important fact is that your health means a great deal to the Army and to the total war effort of the United States against Japan.

Of course it means something to you too. You are not like the Jap who will stick his gun in the trap of a hat for the sake of Hachiko. Neither do you want to kill yourself the slow way, by suffering with disease.

Well there are rules to follow. They all add up to good sense. All you have to do is to take heed. Stay clean, stay in good shape, the result is simple but good. You live in good health.

You won't usually get sick if you take care of yourself.

For example, if you catch venereal disease, the bugs go to work right at you.

The best way to avoid gonorrhoea and syphilis is to be frank from sexual men; now outside of marriage. If at any time you fail to live up to this code, be sure to make full use of all the Army prophylactic materials (preservatives and bandages) (pres-vah-tivz) which are prescribed for your use.

You Can Save Some Dough . . . Saving up good health means that you are saving up something that will be valuable to you after the war. Putting away some of your per month will also mean something later. Mostly it is your own business like y u health, and the last decisions are yours for keeps.

Adding up all the things you do for yourself today and tomorrow in Hawaii along with what you are doing for the Islands and for the Mainland, you can feel right proud to be so much in the swing of things. From these mid-Pacific, beauty spots, halfway between America and Asia, you'll be glad to write home "With, nitz, and love."
