NOVEMBER 16, 2023

What we know about unauthorized immigrants living in the U.S.

BY [JEFFREY S. PASSEL](#) AND [JENS MANUEL KROGSTAD](#)

The unauthorized immigrant population in the United States reached 10.5 million in 2021, according to new Pew Research Center estimates. That was a modest increase over 2019 but nearly identical to 2017.

The number of unauthorized immigrants in the U.S. remained mostly stable from 2017 to 2021

Unauthorized immigrant population in the United States, in millions

Note: Shading shows range of estimated 90% confidence interval.

Source: Pew Research Center estimates based on augmented U.S. Census Bureau data.

PEW RESEARCH CENTER

The number of unauthorized immigrants living in the U.S. in 2021 remained below its peak of 12.2 million in 2007. It was about the same size as in 2004 and lower than every year from 2005 to 2015.

The new estimates do not reflect changes that have occurred since apprehensions and expulsions of migrants along the U.S.-Mexico border [started increasing in March 2021](#). Migrant encounters at the border [have since reached historic highs](#).

How we did this (+)

Who are unauthorized immigrants? (+)

Here are key findings about how the U.S. unauthorized immigrant population changed from 2017 to 2021:

- The most common country of birth for unauthorized immigrants is Mexico. However, **the population of unauthorized immigrants from Mexico dropped by 900,000 from 2017 to 2021**, to 4.1 million.
- **There were increases in unauthorized immigrants from nearly every other region of the world** – Central America, the Caribbean, South America, Asia, Europe and sub-Saharan Africa.
- Among U.S. states, **only Florida and Washington saw increases to their**

unauthorized immigrant populations, while California and Nevada saw decreases. In all other states, unauthorized immigrant populations were unchanged.

- **4.6% of U.S. workers in 2021 were unauthorized immigrants**, virtually identical to the share in 2017.

Trends in the U.S. immigrant population

Unauthorized immigrants were 22% of the U.S. foreign-born population in 2021

Foreign-born population estimates, 2021

Note: Some figures differ from published U.S. Census Bureau totals because they are adjusted to account for population undercount. The unauthorized immigrant population includes those with temporary protection from deportation under Deferred Action for Childhood Arrivals (DACA) and Temporary Protected Status (TPS), as well as pending asylum claims.
Source: Pew Research Center estimates based on augmented U.S. Census Bureau data (IPUMS).

PEW RESEARCH CENTER

The U.S. foreign-born population was 14.1% of the nation's population in 2021. That was very slightly [higher than in the last five years](#) but below the record high of 14.8% in 1890.

As of 2021, the nation's 10.5 million **unauthorized immigrants** represented about 3% of the total U.S. population and 22% of the foreign-born population. These shares were among the lowest since the 1990s.

Between 2007 and 2021, the unauthorized immigrant population decreased by 1.75 million, or 14%.

Meanwhile, **the lawful immigrant population** grew by more than 8 million, a 29% increase, and the number of **naturalized U.S. citizens** grew by 49%. In 2021,

naturalized citizens accounted for about half (49%) of all immigrants in the country.

Where unauthorized immigrants come from

Unauthorized immigrants living in the U.S. come from many parts of the world, with Mexico being the most common origin country.

Mexicans are no longer a majority of unauthorized immigrants living in the U.S.

Unauthorized immigrant population in the United States by country of birth, in millions

Note: Shading shows range of estimated 90% confidence interval.

Source: Pew Research Center estimates based on augmented U.S. Census Bureau data.

PEW RESEARCH CENTER

The origin countries for unauthorized immigrants have changed since the population peaked in 2007, before the Great Recession slowed immigration. Here are some highlights of those changes:

Mexico

The number of unauthorized immigrants from Mexico living in the U.S. (4.1 million in 2021) was the lowest since the 1990s. Mexico accounted for 39% of the nation's unauthorized immigrants in 2021, by far the [smallest share on record](#).

The decrease in unauthorized immigrants from Mexico reflects several factors:

- A broader [decline in migration](#) from Mexico to the U.S.
- Mexican immigrants to the U.S. continuing to return to Mexico
- Expanded [opportunities for lawful immigration](#) from Mexico and other countries, especially for temporary agricultural workers.

The rest of the world

The total number of unauthorized immigrants in the U.S. from countries other than Mexico has grown rapidly. In 2021, this population was 6.4 million, up by 900,000 from 2017.

The U.S. unauthorized immigrant populations from most world regions grew from 2017 to 2021

U.S. unauthorized immigrant population by region of birth, in thousands

Note: All numbers are rounded. The change column is calculated from unrounded totals, giving a more accurate estimate than using rounded totals. Only statistically significant changes based on 90% confidence intervals are shown; other measured changes are not statistically different from zero. Asia consists of South and East Asia. All central Asian republics of the former Soviet Union are included in Europe. The Middle East consists of Southwest Asia and North Africa; Africa refers to sub-Saharan Africa. The U.S. total includes a residual (not shown) from other nations.

PEW RESEARCH CENTER

Almost every region in the world had a notable increase in the number of unauthorized immigrants in the U.S. from 2007 to 2021. The largest increases were from Central America (240,000) and South and East Asia (180,000).

After Mexico, the countries of origin with the largest unauthorized immigrant populations in the U.S. in 2021 were:

- El Salvador (800,000)
- India (725,000)
- Guatemala (700,000)
- Honduras (525,000)

India, Guatemala and Honduras all saw increases from 2017.

The Northern Triangle

Three Central American countries – El Salvador, Honduras and Guatemala – together represented 2.0 million unauthorized immigrants in the U.S. in 2021, or almost 20% of the total. The unauthorized immigrant population from the Northern Triangle grew by about 250,000 from 2017 and about 700,000 from 2007.

Other origin countries

Venezuela was the country of birth for 190,000 U.S. unauthorized immigrants in 2021. This population saw particularly fast growth, from 130,000 in 2017 and 55,000 in 2007.

Among countries with the largest numbers of U.S. unauthorized immigrants, India, Brazil, Canada and former Soviet Union countries all experienced growth from 2017 to 2021.

Some origin countries with significant unauthorized immigrant populations showed no change, notably China (375,000) and the Dominican Republic (230,000).

Detailed table: [Unauthorized immigrant population by region and selected country of birth \(and margins of error\), 1990-2021](#) (Excel)

U.S. states of residence of unauthorized immigrants

The unauthorized immigrant population in most U.S. states stayed steady from 2017 to 2021. However, four states saw significant changes:

- Florida (+80,000)
- Washington (+60,000)
- California (-150,000)
- Nevada (-25,000)

States with the most unauthorized immigrants

U.S. unauthorized immigrant population by state, 2021

Source: Pew Research Center estimates based on augmented U.S. Census Bureau data.

PEW RESEARCH CENTER

The six states with the largest unauthorized immigrant populations in 2021 were:

- California (1.9 million)
- Texas (1.6 million)
- Florida (900,000)
- New York (600,000)
- New Jersey (450,000)
- Illinois (400,000)

These states have consistently had the most unauthorized immigrants since 1990 [and earlier](#).

At the same time, the unauthorized immigrant population has become less geographically concentrated. In 2021, these six states were home to 56% of the nation's unauthorized immigrants, down from 80% in 1990.

Unauthorized immigrants in the labor force

The number of unauthorized immigrants in the U.S. workforce has remained mostly steady since 2017

Unauthorized immigrants in the U.S. who are working or looking for work, in millions

Note: Shading shows range of estimated 90% confidence interval.

Source: Pew Research Center estimates based on augmented U.S. Census Bureau data.

PEW RESEARCH CENTER

The share of unauthorized immigrants in the U.S. workforce was slightly less than 5% in 2021, compared with 3% of the total U.S. population.

Demographics help explain the difference: The unauthorized immigrant population includes relatively few children or elderly adults, groups that tend not to be in the labor force.

Overall, about 7.8 million unauthorized immigrants were in the U.S. labor force in 2021. That was up slightly from 2019 but smaller than every year from 2007 through 2015.

Detailed table: [Unauthorized immigrants in the labor force for states, 2021](#) (Excel)

Here are some additional findings about unauthorized immigrants as a share of the workforce nationwide and in certain states:
